With a PLB, Dan could have walked away with more than his life.

Since 2003, 38 people owe their lives and limbs to a PLB. Dan isn't one of them.

While skiing backcountry terrain that he'd skied many times before, Dan got hopelessly lost for five days and eventually lost his legs to frostbite. Sheer willpower helped save his life amid overwhelming odds. It could have been worse.

5.7 in. tall, 12 oz.

Or it could have been much better if Dan had packed ACR's new TerraFix™ 406 GPS I/O. This powerful, little Personal Locator Beacon (PLB) transmits a distress signal over both 406 MHz and 121.5 MHz, alerting the nearest rescue team worldwide through a satellite system that's continually orbiting the Earth.

Where cell phones fail and two-way radios fall short, TerraFix can get you out of a jam fast. If you ski, hike, bike, climb, canoe, kayak, hunt or fish in remote locations, a PLB is essential gear.

Just ask Dan. He's already back on the slopes, but not without the protection of his ACR TerraFix 406 PLB.
